

CASE STUDY

Impact Group NSW has extensive experience with lead paint removal. For almost 30 years we have provided these services to major commercial and civil projects.

BREAKFAST POINT

Sitting in the middle of the Breakfast Point, Canada Bay development is the old Plumbers Workshop. After being derelict for many years, this heritage building was earmarked for development into a collection of luxury apartments.

Impact Group NSW were engaged to provide lead paint removal services for the refurbishment of this grand building.

CHALLENGE

To remove the lead paint from this heritage building while providing protection to the surrounding environment from lead contamination.

Client

Pimas Gale Pty Ltd

Location

Breakfast Point, NSW

Job Value

\$90,000

RESULTS

With the lead paint removed, the original architectural brick features were revealed and the building was on the way to being ready for it's new residents.

SOLUTION

The building was scaffolded and encapsulated to protect the surrounding environment from contamination. Mobile dust extraction systems were installed to process dust created during the works.

1

Abrasive Blasting

Abrasive blasting is the preferred process for surfaces requiring preparation or refurbishment. This process can suit any surface including brickwork, steel, concrete, timber and waterproof membranes.
